The inventors claim a compsn. for the redn. or prevention of undesired prostatic growth in males. The compsn. contains a decapeptide (gonadorelin) (AAP10097) with an appropriate vehicle or support. The compsn. is used for treating e.g. benign prostatic hyperplasia by parenteral admin. in daily doses of 0.035-11.0 (pref. 0.080-2.0) mg/kg. Gonadorelin is the generic name for LH-RH and is described in US3835108. In the example s.c. injection of the compsn.significantly reduced the wt. of seminal vesicles and ventral prostate in rats without affecting the wt. of the testicles. The invention relates to an agent comprising a neurotoxin preferably botulinum toxin for treating endocrine disorders for e.g. gonadotrophin related illness. The agent is useful for treating gonadotrophin related illness e.g. prostate cancer, endometrial cancer, pancreatic cancer, breast cancer, endometrions or precocious puberty. It is also useful for decreasing gonadotrophin secretion in a mammal. The present sequence is gonadotrophin releasing hormone analogue (GnRH-A)
                                                                                                                                                                   ô
antihyperlipaemic; antithrombotic and/or anticancer agent or an agent for treating menopause. The composition of the invention is useful for treating and preventing diseases associated with angiotensin II, such as: circulatory diseases; hypertension; gastrointestinal disorders and cancer. The present amino acid sequence is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                        Gonadotrophin releasing hormone analogue, neurotoxin; prostate cancer; endocrine disorder; gonadotrophin related illness; endometrial cancer; pancreatic cancer; breast cancer; endometriosis; precocious puberty;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ๙

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an agent containing gonadotrophin releasing hormone (GnRH) agonists or antagonists. GnRH agonist and antagonists have cytostatic activity. The agent can be used for preventing post-operative recurrence of premenopausal breast cancer. T agents have no serious side effects with sustained drug effect over a long period without frequent administration. The present sequence represents an example of a GnRH agonist, from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                       The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a cadtive group (II) (e.g. succilimidy! and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a ceptidase stabilised therapeutic peptide composed of 3.50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth contransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not sultable as drug candidates as they require frequent compities are not sultable as drug candidates as they require frequent compities are not sultable as drug candidates as they require frequent contradiction due to rapid degradation by peptidases in the body. Contradiction of peptidases to increase length of activity (half contradellular uptake and interference with physiological processes. AAB30829 to AAB32441 represent peptides which can be used in the case applification of the present invention
                                                                                                                                                                                                                                                                                                                                                       ö
                                                    Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GnRH-III; autoimmune disease; transplant rejection; retroviral disease; graft-versus-host-disease; lymphoproliferative disease; gonadotropin-releasing hormone.

The present invention relates to a product comprising a proliferatively active moiety (PAM) linked to nucleic acid material which is associated with a protective material. The PAM product is useful for manufacturing a medicament for treating e.g. an autoimmune disease, transplant rejection, retroviral disease, graft-versus-host-disease, or lymphoproliferative disease, comprising cells bearing a high affinity receptor for PAM. The present sequence is a peptide of gonadotropin-releasing hormone (GnRH). GnRH is a peptide hormone, which has high-affinity receptors, and therefore can be used in the present invention
Novel product comprising proliferatively active moiety linked to genetic material, useful as vectors for protected nucleic acid material and as mitogen to stimulate proliferation of target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sustained release composition comprises angiotensin II antagonist and antihypertensive, antihypoglycemic, antihyperlipemic, antithrombotic or anticancer agent or agent for treating menopause.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises sustained release compositions that contain: angiotensin II antagonist; antihypertensive; antihypoglycaemic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sustained release composition; angiotensin II antagonist; menopause; angiotensin II-related disease: circulatory disease; hypertension; gastrointestinal disorder; cancer.

                                                                                                                                                                                                                                                                                                             The present sequence represents luteinising hormone releasing hormone (LHRH). It is used in vaccines with T helper cell epitopes AAB08076-B08101, derived from canine distemper virus (CDV). Compositions comprising these T cell helper epitopes are useful for inducing an immune response in an animal. The epitopes are useful as components of animal, in particular, canine vaccines, either simply as synthetic peptide based vaccines and as additions to vaccines containing more complex antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Luteinising hormone releasing hormone (LH-RH) related peptide SEQ ID:153.
                                                                                                                                                                                                                                                                 Novel T helper cell epitopes derived from canine distemper virus useful for preparation of canine vaccines.
         Amino acid sequence of truncated luteinising hormone releasing hormone.

The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a

comprising a therapeutically active amino acid region (III) and a tracthed to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a compared set all therapeutic peptide composed of 3.50 amino acids.

Comprision and neurotransmitters, to protect them from peptides activity in two factors and neurotransmitters, to protect them from peptides activity in compared to the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent complication due to rapid degradation by peptidases in the body.

Comprision and actaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half compared in the present physiological processes.

Compared to the present invention compared in the compared to the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Luteinising hormone releasing hormone (LH-RH) related peptide SEQ ID:146.
                                                                                                                                                                                                                                                                                                                              Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates immunogenic composition for eliciting an immune response to lutainising hormone releasing hormone (LHRH). The composition response to lutainising hormone releasing hormone (LHRH). The composition computates a LHRH-diphtheria toxoid (UT) conjugate adsorbed to an ionic comprises a LHRH-diphtheria toxoid in an ionic confirmation of an animal of carefulating obstruction of an animal, e.g. aggression or sexual activity. They can also be used for achieving production gains in livestock by the sexual maturation of an animal, e.g. aggression or sexual activity. They can also be used for inhibiting the growth of cells which are regulated directly or indirectly by LHRH, e.g. malignant broated cells, malignant ovarian cells, malignant concerts cells, malignant or hyporphisatic cells. They can also be used for inhibiting pregnancy, prostate cells, malignant confidence of an animal. They can also be used for down-regulating the libido of an animal. They can also be used for inhibiting pregnancy, prostate enlargement, endomerricals or inflammatory responses. The LHRH compositions induce a more effective immune response against LHRH than the LHRH-carrier-adjuvant compositions. The effective immune response against LHRH are allers in prevention of the release of the hormones LH and PSH from the anterior pituitary. Sequences AAW94890-93 care peptide derivatives of LHRH

The present sequence is a peptide fragment of human luteinising hormone releasing hormone (also known as LHRH, GrRH and gonadotrophin releasing hormone). It was used to demonstrate the novel adjuvant of the invention, which has lower reactogenicity then previous compositions. Vaccination of humans and animals against LHRH can be used as a method of fertility control, as well as enabling the control and treatment of disorders of the reproductive organs, such as testicular, breast, prostate enlargement and endometriosis. The composition of the invention contains an anionic macromolecule and a saponin component, the latter of which his an immunostimulant, and it can also be used with other immunogens including soluble protein antigens, peptide haptens conjugated to a carrier protein and whole viruses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Adjuvant composition for manufacturing an immunogenic composition that can elicit an immune response in an animal, comprises an ionic polysaccharide component and a saponin component that is an immunostimulating complex.

activities. (I) can be used as GnRH agonists used in combination with selective osstrogen receptor modulators, selective androgen receptor modulators, selective androgen receptor modulators, sex hormone synthesis inhibitors, lyase inhibitors, receptor type tyrosine kinase inhibitors, bone metabolism regulators, receptor mimunocherapy drugs, cytokine/chemokine inhibitors or endothelin receptor antagonists for treating and preventing endometriosis, myometrium tumour, Alzheimer's disease, circulatory system disorders, mnopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular prostatomegally or prostate cancer or breast cancer or their reoccurrence or metastasis. Combination enhances the quality of life by enhancing GnRH agonist activity and/or reducing side effects. The present sequence increases.

A composition is claimed containing LHRH or its analogues. The composition is used to treat prostate adenocarcinoma, benign hypertrophy of the prostate, endometriosis, dysmenorrhea, hirsutism, hormone-dependent mammary tumours, for treatment or prevention of precocious puberty, delaying the onset of puberty and for treating acne. The compositions may also contain antiandrogens. See AAP10411-P10418 (Updated on 01-UUL-2002 to add missing PI field.) (Updated on 10-WMR-2003 to add missing os field.) (Updated on 25-WAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Compsn. contg. gonadoliberin or its analogues - for treating parathormone deficiency states, e.g. hypocalcaemic conditions or hypertension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The inventors claim a composn. for treating metabolic disorders caused by inadequete secretion of endogenous parathormone (PTH) which contains, apart from an acceptable carrier, gonadoliberin or agonists at least as strongly active as gonadoliberin. For parenteral use these provide 0.5-5 micrograms gonadoliberin per unit dose, and for application to mucosa (incranasally) 10-200 micrograms per dose, for an adult of average wt. Pharmaceutical composition e.g. for breast cancer comprises gonadotrophin releasing hormone agonist and selective estrogen receptor modulator.

Disclosure; Page 9; 73pp; Japanese.

The present invention describes a pharmaceutical composition (I) for treating breast cancer, endometricass, myometrium tumour, Alzheimer's disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastesis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance. (I) comprises a gonadotrophin releasing hormone (GnRH) agonist and a selective ostrogen receptor modulator (SERM). (I) has cytostatic, gynaecological, nootropic, neuroprotective, cardiovascular, endocrine, muscular and osteopathic

Miscretive of chicken hypothalamic luteinizing hormone-releasing hormone. I. Structural determination on partially purified material., S. Eto., Chem. 257:10728 (1982).

J. Biol., Chem. 257:10722-10728 (1982).

J. FUNCTION: Stimulaes the secretion of gonadotropins.

SUBCELLULAR LOCATION: Secreted.

SIMILARITY: Belongs to the GRRH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

         10-OCT-2003 (Rel. 42, Last annotation update)
Progonadoliberin I precursor [Contains: Gonadoliberin I (LHRH I)
(Luteinizing hormone releasing hormone I) (Gonadotropin releasing
hormone I) (GRRH I) (Luliberin I); GRRH-associated peptide I (GAPI)].
                                                                                                                                                                                                                                         "Cloning and characterization of cDNAs encoding the GRRH1 and GRRH2 precursors from bullfrog (Rana catesbeiana)."; 
J. Exp. Zool. 289:190-201(2001).

    similarity).
    SUBCELLULAR LOCATION: Secreted.
    TISSUE SPECIPICITY: Forebrain.
    DEVELOPMENTAL STAGE: Expressed at significantly higher levels during post-breeding. Not expressed in pituitary.
    SIMILARITY: Belongs to the GRRH family.

                                                                                  Rana catesbeiana (Bull frog).

Mardi M., Renault P., Monnet V.;
"Duplication of the pepF gene and shuffling of DNA fragments on the lactose plasmid of Lactococcus lactis.";
-1. Function: Hydrolyzes peptides containing between 7 and 17 amino acids with a rather wide specificity.
-1. COPACTOR: Bain a lather wide specificity.
-1. COPACTOR: Bains 1 zinc ion (By similarity).
-1. SIMILARITY: Belongs to peptidase family M3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .,

"The ribosomal protein gene cluster of Mycoplasma capricolum.";

Mol. Gen. Genet. 210:314-322 (1987).

-! FUNCTION: This small ubiquitous enzyme is essential for maintenance and cell growth.

-! CATALYTIC ACTIVITY; ATP + AMP = ADP + ADP.

-! SUBUNIT: Monomer Elys similarity).

-! SUBCELLOLAR LOCATION: Cytoplasmic.

-! SINILARITY: Belongs to the adenylate kinase family.

                                                                                                                                                                  (Potential).
-!- PTM: Merozoite surface antigen contain the sequence of 83 kDa, 4
kDa and 19 kDa antigens which are the major surface antigens of
merozoites. The maturation take place during schizont.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Exp. "Allelic dimorphism in a surface antigen gene of the malaria parasite
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                              PIM: Merozoite surface antigen contain the sequence of 83 kDa, kDa and 19 kDa antigens which are the major surface antigens of merozoites. The maturation take place during schizont.
SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor

-!- PTM: Merozoite surface antigen contain the sequence of 83 kDa, 4 kDa and 19 kDa antigens which are the major surface antigens of merozoites, The maturation take place during schizont.
